

ABSTRACT FACTORY PATTERN

Creational Design Pattern

Abstract Factory Pattern

Imagine you're building a **food ordering app** that needs to support multiple cuisines (**North Indian, South Indian, Chinese**). Each cuisine has its own complete meal set with Starter, Main Course, and Dessert. The challenge is to design a system where you can switch between cuisines without changing the code that processes customer orders.

Without the Abstract Factory Pattern, your order processing code would be tightly connected to specific dish implementations (like Paneer Tikka, Dosa, Spring Rolls), and switching between cuisines would mean rewriting large portions of your ordering system.

Abstract Factory Pattern

North Indian Cuisine:

Starter → Paneer Tikka

Main Course → Butter Chicken

Dessert → Gulab Jamun

South Indian Cuisine:

Starter → Medu Vada

Main Course → Dosa

Dessert → Payasam

Chinese Cuisine:

Starter → Spring Rolls

Main Course → Fried Rice

Dessert → Fortune Cookie
